

Project Description:

This portfolio is a personal and professional homepage for Kaylee Faherty, a data science graduate student at Northeastern University's Roux Institute and former chemical engineer. After two years in Product Development R&D, Kaylee found her passion at the intersection of data, curiosity, and communication.

The site is designed to give visitors a complete picture of who Kaylee is, from her technical skills and academic projects to her personality and life outside of work.

User Personas:

- John Smith
 - A technical recruiter at a data/tech company
 - 30-45 years old
 - Came across my profile on LinkedIn, scanning to get some basic background
 - Determine if I am a fit for a role they are recruiting for, comparing skills, first impression, surface level
 - Pressed for time and scanning dozens of profiles for someone with the skills/experience
- Sally Jones
 - A hiring manager at a company I applied for
 - 45-60 years old
 - I applied and either have already had an interview or they are considering me for an interview
 - Already reviewed my resume, looking for a deeper look into the type of person I am
 - Already viewed a lot of generic portfolios, looking for someone that stands out and fits their culture
- Hope Jordan
 - A colleague in a similar field of work
 - 20-30 years old
 - A friend that is looking for inspiration for their own portfolio, content and design style she can adapt for her own site

User Stories:

John Smith:

As a technical recruiter, I want to find candidates with a specific skill-set and experiences so that I can align them with job openings at the companies I recruit for. When I navigate to

the homepage I am immediately looking for skills and professional experience that aligns with my requirements.

Sally Jones:

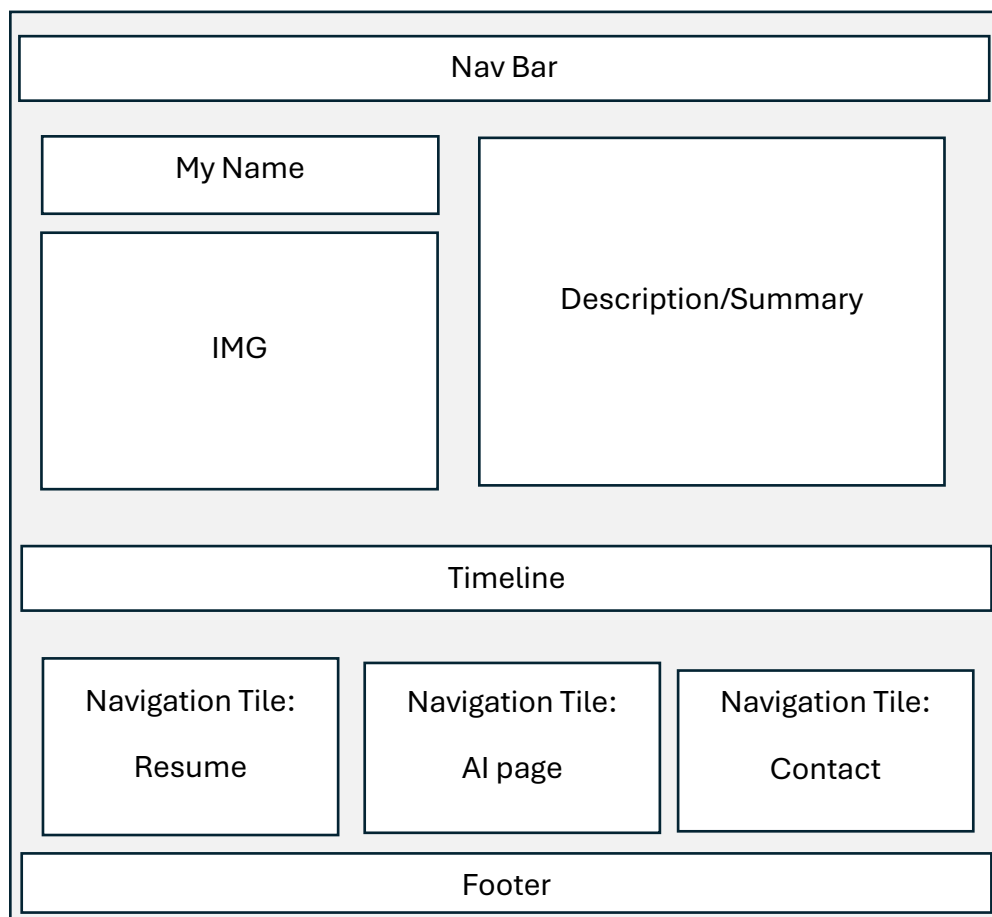

As a hiring manager, I want to determine if a candidate who applied for the role I am trying to fill would be a good fit for the team, so that I can decide if a second interview or offer letter would be an appropriate next step. When I navigate to the homepage I am immediately looking for indications of a well rounded person, not just someone with all of the technical skills, since we have likely already established that they align in skills/experience with the role.

Hope Jordan:

As a fellow early-career professional, I want to determine what features and content I would like to include in my portfolio, so that I can also market myself to potential employers and paint a picture of my personality. When I navigate to the homepage I am taking the time to view all of the content, style choices, design features, and clicking through each page to get a picture of the full site. I really like the timeline feature, so I bookmark that to include in my portfolio as well.
